PROFESSIONAL SUMMARY

Aspiring AI Engineer and B.Tech AIML student specializing in scalable backends (Node.js, Spring Boot) and Generative AI (RAG, Local LLMs). Passionate about building intelligent, data-driven platforms from the ground up.

EDUCATION

Bansal Institute of Science and Technology (RGPV) <i>Bachelor of Technology in Artificial Intelligence and Machine Learning (AIML)</i> • Current CGPA: 7.9 (4th Semester)	Bhopal, MP <i>Expected 2028</i>
Bardsley English Medium Senior Secondary School <i>CBSE Class XII (12th Standard)</i> • Percentage: 78.2%	Katni, MP
Bardsley English Medium Senior Secondary School <i>CBSE Class X (10th Standard)</i> • Percentage: 86.0%	Katni, MP

PROJECTS

ChargeMate (VoltPod) <i>React, Node.js, Socket.io, MongoDB, Python</i> • Built a full-stack EV charging station locator and real-time slot booking platform. • Integrated a Python-based machine learning service alongside a Node.js/React stack to prepare the platform for intelligent, predictive analytics. • Utilized WebSockets (Socket.io) to broadcast live slot availability updates to users instantly.
Enterprise Application API <i>Java, Spring Boot, RESTful Architecture</i> • Engineered a scalable backend system utilizing Java and Spring Boot to manage core application data. • Implemented end-to-end CRUD operations, establishing a robust foundation for secure and efficient database interactions and API responses.
Ledger & Banking API (Transaction System) <i>Node.js, Express, MongoDB, JWT</i> • Developed a robust, double-entry bookkeeping backend simulating a digital bank/wallet system. • Engineered secure financial transfers using strict ACID-compliant MongoDB transactions to prevent data anomalies. • Implemented stateless JWT authentication, automated Nodemailer email alerts, and a specialized system-level minting feature for user rewards.
FinTech Value Investing Tool <i>Python, Data Analysis</i> • Developed a beginner-friendly fintech application focused on value investing principles. • Engineered a Python-based user interface to help users analyze and track financial metrics effectively, laying the groundwork for AI-driven predictive insights.

TECHNICAL SKILLS

AI & Machine Learning: Generative AI, Retrieval-Augmented Generation (RAG), Local LLMs (Ollama)
Languages: Java, C++, Python, JavaScript
Backend & Frameworks: Spring Boot, Node.js, Express
Frontend & Databases: React, MongoDB, JDBC, HTML/CSS
Tools & Concepts: Git, REST APIs, Data Structures & Algorithms (DSA)
